SIGTEC MOBITAG II VEHICLE TRACKING SYSTEM

Private or Monitored Systems

The Sigtec MobiTAG II vehicle tracking system is a second generation Vehicle and movable asset tracking system developed and refined by Sigtec Limited in Australia for the Australian and overseas AVL market.

The system provides a GPS based system that enables you to track your vehicles and mobile assets in real time using the standard GPS system and mobile radio technology. Improved productivity, reduction in fleet running costs and added security and control of your assets is now possible using the Sigtec MobiTAG system.

The basic system comprises of a GPS mobile unit and mobile radio fitted in your vehicle, a base radio and Sigtec base system with mapping software installed into a standard PC at your office.

The vehicle location system is displayed on the PC based system using a MapInfo map of Port Moresby, or other locations in PNG, the vehicle location GPS information is relayed via the mobile radio to the base and a real time location of the vehicle is displayed on the screen.

Monitored Systems

Fit your vehicle with a GPS system and have it monitored 24 hours a day 7 days a week by Protect Security. A system can be installed in your vehicle for as little as K5,200.00 (plus VAT). Includes:

- GPS Receiver
- GPS antenna
- UHF transceiver
- UHF Antenna
- Radio Modem
- Duress Switch
- Installation

Monthly monitoring fee applicable. Includes response to duress and personal assistance.
